

Clever IDM

Hands-off identity and password management for schools

Clever IDM saves time and keeps accounts secure by automating account provisioning and password management for Google, Active Directory, and Entra ID

Secure, up-to-date accounts

Manual account management can leave security gaps. Clever IDM automatically creates and deactivates accounts, manages group membership, and maintains audit logs, allowing you to control access and enforce strong passwords.

Reduce learning disruptions

Keep the learning process running smoothly by removing barriers to access without sacrificing security. Clever IDM allows delegated and self-serve password resets to students and teachers with flexible complexity requirements to handle password issues on the spot.

Save time with automation

Clever IDM is the ultimate time-saver for IT staff who are tired of spending endless hours on identity and access management. Administrators can manage automated rostering, secure authentication, and identities all in one place, freeing up time to focus on more important tasks.

The most education-friendly identity and password management solution
